

# MAXIMUS

[www.maximus-rods.com](http://www.maximus-rods.com)

**RESIDENT**

The novelty of the 2023 season is the Resident spinning rod. It's classic spinning with a solid neoprene handle for a comfortable work with the rod and secure grip. The blank is made of IMF graphite. The material of the guides inserts is SIC. Resident is a universal fast action spinning rod (FAST ACTION), therefore, it can be used for fishing while combining different methods of fishing and using different types of baits. However, this rod perfectly knits fish, and the balanced design guarantees accurate and far casting. The handle is made of dense finely porous neoprene (EVA), which gives the spinning rod a modern look. Warm reel seat (Warm Reel Seat), provides maximum comfort when using the rod in cold weather. This model has a wide range of sizes, including the most popular tests and lengths.

UMBA

The Uмба spinning rod (Gorbusha fishing) has a telling name, because it was created specifically for catching the most affordable salmon in Russia - pink salmon. Catching this fish is very popular among residents of the northern regions such as St. Petersburg and the Far East. The rod has several unique features, firstly, it has a length of 3.3 and 3.5 meters, and secondly, it is a three-piece rod with a comfortable transport length. The spinning rod is named after the well-known large and full flowing northern river and for fishing in these harsh conditions the blank has an increased power, which helps to confidently play an expressive trophy. Moreover, the length and power of blank allow you to use Uмба for long-distance casting of large lures when catching other fish species, such as asp. The blank is also predisposed for sea fishing from the shore, where the casting range is critical. The blank is made of high modulus graphite IMF, equipped with a warm reel seat and added to the handle combination of high quality neoprene and cork. Among northern latitudes such bonus is very demanded. The rods have guides with SIC inserts enclosed in reinforced low-profile frames (1 - on two feet, the rest on one foot).

**REEF**

Seas, oceans, large rivers and lakes, these are the conditions that require long-range and accurate casting using fairly large lures. The Reef Fast action spinning rod is a response to the growing popularity of fishing in these waters. The model is made in 3.3m, 3.6m and 3.9m sizes, and it is quite a rare offer on the spinning rod market. Reef is a three-piece rod. The extreme size is compensated by a comfortable transport length. Spinning has increased power and was created for catching fish from sea coasts, but this does not mean that its use is limited only to sea areas. It is also ideal for catching large fish in large rivers, lakes and reservoirs. Note that this model is perfect for fishing with a bombard. Blank is made of IMF graphite, equipped with a solid handle made of a combination of high quality neoprene, cork, and warm reel seat (Warm Reel Seat). The warm solid handle makes it very comfortable to fish in seas and large waters with cold weather conditions. The spinning rod series has guides with SIC inserts and it is enclosed in reinforced frames that prevent line overlap (Tangle Free). Guides alignment is made according to the K-Guide Concept with increased running sizes.

BUTCHER-X SPINNING

The updated Butcher-X series has retained its main advantage – excellent build quality at an attractive price. The new blank is made of IMF graphite and equipped with SIC rings. It is worth noting that when developing the updated version, we tried to take into account most of the wishes of anglers. Butcher-X is an all-around spinning rod that is suitable for performing almost any task when fishing with all kinds of baits. When creating the updated series, we greatly improved its performance, the new rods excellently „play” the fish, preventing disappointing fish lost. The spinning handle is made of EVA neoprene and rubber cork, which gives the spinning a modern look while maintaining the classic tradition. Warm reel seat provides maximum comfort when used in cold weather. Spinning is perfectly balanced and designed to catch all types of predatory fish.

**BUTCHER X JIG, TWITCH**

Like the previous model the updated series of Butcher-X spinning rods has retained its main advantage - excellent build quality at an attractive price. The blank is made of IMF graphite and equipped with SIC guides.

It should be noted that when developing an updated version, we tried to take into account most wishes of our customers. Butcher-X is the model that is suitable for performing

almost any task when fishing with all types of lures. When creating the updated series, we have improved its performance in many ways, the new rods perfectly tie the fish, preventing such embarrassing moment as fish getting away. Spinning handle is made of EVA neoprene and rubber cork, which gives the spinning modern look. Warm reel seat (Warm

Reel Seat) provides maximum comfort when used in cold weather. Spinning is perfectly balanced and designed for catching all kinds of predatory fish. In 2023, the range of Butcher-X spinning rods was expanded with versions for jig fishing (Jig) and twitching (Twitching). New rod build – Extra fast. Jig spinning handle - solid, twitching - split handle type. Handle material – neoprene (EVA)

INDIGO

In 2022, the MAXIMUS Rods collection was replenished with the Indigo line of spinning rods. The rods belong to an affordable price category, meanwhile, during development process we took into account wishes of practicing anglers regarding quality and technical characteristics of the spinning. Blank is made of IMF graphite, equipped with guides with SIC inserts. Wide range includes models with a length of 300 and 330 cm, specially designed for ultra-long casts (Ultimatum Cast). The spinning action is medium-fast. As an all-rounder, Indigo can be used to catch almost any type of predatory fish in a wide variety of conditions. The use of a warm reel seat (Warm Reel Seat) in the design of the handle provides maximum comfort when fishing in cold weather. Spinning is excellently balanced, perfectly «knits» fish, suitable for catching most types of lures.

# Villain

Maximus Villain is a series of spinning rods that combine low price, high quality and modern technologies. Villian was designed as a universal spinning rod and, as a result, anglers can fish with it using different retrieval techniques. Villian is perfect for fishing with various jigs since it is a Fast action rod. K-Guide System was applied to this class of spinning rods for the first time. The blank is made of IMF graphite and equipped with SIC guides in Tangle Free frames. The split handle is made of thick microporous neoprene (EVA), it also features an attractive modern design and comfortable grip. The Warm Reel Seat provides maximum comfort in any weather conditions. This is a perfectly balanced spinning rod, which works well with different types of lures and is suitable for various kinds of predators.

WINNERX

The updated Winner-X series of budget spinning rods is an affordable spinning rod that has retained the main advantages of the previous model: reliability, practicality, and versatility. The blanks of the series have a fast action, allow you to manage with fish of any size and at the same time are suitable for fishing with all types of lures – wobblers, spinners and jigs. The new generation X boasts an increased number of guides arranged according to K-Guide Concept. All guides are modern, lightweight, with SIC inserts, and in Tangle Free frames. The rod blank is made of IMF graphite. The new warm reel seat (Warm Reel Seat) is equipped with a modern plastic screw that increases sensory and provides comfort when fishing in all weather conditions. The spinning is perfectly balanced, has modern design and equipment, which allows owners of the spinning to feel confident in any situation on the water. Winner-X is not a compromise, but a conscious choice of an angler who is serious about choosing his main fishing tool.

# AXIOMX

Axiom-X is a versatile line of spinning rods with an updated elegant design and an attractive price-quality ratio. Compared to its predecessor, the number of throughput guides has been increased on the new model. Guides are in K-frames with SIC inserts are arranged according to the K-Guide Concept. The fast action blank is made of IMF graphite, equipped with an ergonomic neoprene handle (EVA) and a “warm” reel seat (Warm ReelSeat). The reel seat is equipped with a carbon nut, which increases the sensitivity of the SSS (Super Sensitive System) rod and provides comfort when fishing in various weather conditions. Spinning is perfectly balanced and designed for fishing with a wide variety of lures. It is important to note that the AXIOM model has a wide range of sizes, which has expanded with the update with new tests in a length of 3 m and new lengths - 3.3 m.

ZIRCON

For the new Zircon spinning rods series, the same well-known blank construction was used as for the popular Axiom series. Engineers have made just a few small changes applying the more up-to-date “split handle” design and the rare black colour for the guiding ring frames. The Zircon spinning rod was designed as Fast action, all-purpose and intended for a wide group of anglers. Its blank is made of IMF carbon, fitted with light weight SIC guides and comfortable Warm Reel Seat made of dense fine-pored neoprene (EVA). The guides in Tangle Free frames are set up in accordance with the modern K- Guide Concept. The Maximus Zircon rods are available in a wide range of sizes so that you can find a suitable rod for any fishing situation. Due to its perfect balance, this model seems to be very light, but at the same time incredibly powerful to fight a big fish!

## ZIRCON JIG

The main task of a jigging gear is to have an effective sensitivity. The special Zircon Jig series differs from the “universal” one: it has a different blank and a reel seat. It is designed according to classic principles of a jigging rod – blanks of this series are built more cone-shaped and the tip is much more elastic. Fitted with SSS (Super Sensitive System) reel seats for maximum sensitivity. The blanks are made of IMF carbon, equipped with lightweight SIC guides in Tangle Free frames, placed in accordance with K-Guide System. The reel seat deserves special attention. Thanks to its peculiar design, the angler’s fingers always contact directly with the rod blank, which partly provides an excellent sensitivity. The split handle ensures a comfortable grip. The rod shows excellent casting characteristics, which are so necessary when fishing along distant breaklines and slopes.

**Black Side-X TWITCHING**

The Black Side-X is an updated range of specialized budget twitching rods. Ex-fast action contributes to the confident operation of spinning with jerky twitching of wobblers. The blank is made of IMF carbon, equipped with guides with SIC inserts arranged according to the K-Guide Concept system. The spinning handle has split design and made of dense finely porous neoprene (EVA), has a modern design and comfortable grip. The reel seat is warm (Warm Reel Seat), providing maximum comfort when fishing in all weather conditions. Compared to its predecessor, the Black Side-X model has a blank with increased rigidity, allowing you to animate the most «stubborn» wobblers. Spinning rods are equipped with guides in modern lightweight Tangle Free frames. Thanks to a wide range of sizes, it became possible to choose models of different lengths and tests, designed for fishing with wobblers of all types and sizes.

*IchiroX*

A series of popular Ichiro-X spinning rods from Maximus will delight fans of fishing with ultralight and light tackle. In the updated «Light Fishing» line, the changes mainly affected the ergonomics of the handle - the engineers finalized it and gave it a finished look. The reel seat is equipped with a carbon nut, which increases the sensory HSS (Hyper Sensitive System) and provides comfort when fishing in various weather conditions. In 2 meter models, the number of guides has been increased. As in the previous generation, the blanks are made of IMF graphite, equipped with ultra-light AT-GUIDE guides, arranged according to the K-Guide Concept. The lineup has been replenished with several stream fishing specialized rods. Due to the length (1.45-1.6 m) these spinning rods are great for fishing in «cramped» conditions on an overgrown shore. The medium-fast action allows you to make ultra-precise casts and perform various stream jerk retrieves. The spinning handle is classic, made of dense finely porous neoprene (EVA), has a modern design and comfortable grip. Despite its main specialization - stream fishing with wobblers, this model is able to work with a wide variety of lures. All rods in the Ichiro-X series are well balanced and have enough power reserve to control the jerks of fairly large fish.

**POINTER** ROCK FISH

Maximus Pointer (Rock Fish) is the junior model of the spinning rods, which are specialized in fishing with micro jigs. Its sensitive solid tip allows feeling the lightest bites and at the same time ensures effective casting of micro baits. The tip is painted in white colour for the best visual control. The blank is made of IMF carbon, equipped with SIC micro-guides in Tangle Free frames, placed in accordance with K-Guide System. The ergonomic split-grip handle reduces overall weight of the rod but increases its sensitivity and improves balance. It is made of dense microporous neoprene (EVA). The rod is equipped with the reliable Warm Reel Seat (IPS). Ex-Fast lightweight blank in combination with the monolithic «insert» provides maximum feedback when fishing with micro baits. Pointer is a budget, perfectly balanced spinning rod. It's a great option for those who prefer delicate fishing with micro baits.

**POINTER X NANO-JIG**

The Pointer X Nano-Jig is a specialized model for fishing with jigs and microscopic jig heads. Spinning retained the main features of the classic model – low price, IMF graphite material, sensitive monolithic top painted in contrasting white, which allows to register the most delicate bites and helps with lure control. At the same time, Pointer X is now equipped with light guides in AT-Guide frames, which significantly lightened the rod and gave it elegance. The rod has SIC guides as before. Spinning runnings are done according to the Mini Guide System scheme. Convenient split type handle is equipped with a modern ergonomic reel seat HSS (Hyper Sensitive System) reduces the weight of the spinning rod, while significantly increasing sensory and improving balance. The elastic blank allows you to manage with the fish as productively as possible, minimizing the possibility of losing your trophy or breaking the fishing line.

Workhorse-Z

Work Horse - Z is an updated series of universal spinning rods with a wide range of models and a fast action. Thanks to the new blank and a modified dimensional map of the guides, we have managed to achieve faster blank recovery speed (attenuation of «spurious» oscillations), as well as reducing the weight of the entire spinning rod compared to its predecessor. At the same time, the popular rod series has retained its main trump card - strength and durability. The number of guides has been increased, which allows you to properly distribute the load on the blank. It is also necessary to note that the new reel seat is now modern, ergonomic and warm (Warm Reel Seat). The handle is solid. It is made of dense finely porous neoprene (EVA). The blank is made of IMF graphite, equipped with guides with SIC inserts arranged according to the K-Guide concept. Modern frames of the guides (Tangle Free) perfectly prevent line overlap during the cast. Work Horse Model Z, as it was before, has excellent casting characteristics, which will appeal to a wide range of anglers.

*Workhorse* **BF** BASS FISHING

The Work Horse-BF is a specialized rod for bass fishing. The series is represented by casting and spinning models both in one-piece and two-piece versions. A distinctive feature of the Work Horse-BF is its versatility in the use of various types of lures. The rods are great for fishing with hard baits, spinnerbaits, and various rigs with soft lures (soft baits). The Fast Action blank is made of IMS graphite, equipped with guides with SIC inserts in Tangle Free frames, arranged according to the K-Guide Concept. The spinning handle has split modern design, made of dense finely porous neoprene (EVA) and provides comfortable grip. We skillfully combined relatively light weight, good sensitivity and reliability in these rods. All models in the series have enough power reserve to use them in «strong places», which will definitely appeal to fans of bass fishing.

**WILD POWER-Z**

Wild Power-Z is an all-around spinning rod with an updated elegant design and a unique price-quality ratio. Compared to the previous model, the number of guides on the new model has been increased (on models longer than 2.4 m). SIC guides are arranged according to the K-Guide system. Fast action blank is made of IMS graphite, equipped with an ergonomic two-color neoprene (EVA) handle and a “warm” reel seat. Wild Power-Z has an excellent casting range, high sensitivity and a large margin of safety. These characteristics were obtained through the use of the most modern materials and high-quality components. Spinning is perfectly balanced and designed for fishing on a wide variety of types of lures.

ANVIL

This is a series of rods specially designed for twitching. These Ex-Fast rods can animate even the most «stubborn» lures. The blank is made of IMF carbon, equipped with SIC micro-guides in Tangle Free frames, placed in accordance with K-Guide Concept. Anvil is equipped with a unique reel seat, in which the base of the frame and the fixing nut are made as a single unit and do not have any protrusions or rims. This is very comfortable for the angler's hand, especially for extended periods of fishing. Covered thread Warm Reel Seat. The split handle is made of high quality microporous neoprene (EVA). It reduces overall weight of the rod but increases its sensitivity and improves balance. Elaborate design and great balance of this rod allow the anglers to make accurate casts and feel confident using a "twitch" retrieve effectively.

*Emissary*

K-Guide

AT-Guide

For this new series of spinning rods we used the well-proven blank initially designed for the Ichiro series. Our experts have increased the range of sizes, applied an unusual camouflage design and a split-grip handle, they also used different types of guides for different models. The Ultralight and light models have been equipped with lightweight AT guides, whereas medium and medium light – with more powerful K-Series guides.

These all-purpose medium-fast rods are designed for a wide variety of anglers. Its blank is made of IMF graphite, fitted with comfortable Warm Reel Seat made of dense fine-pored neoprene (EVA). The guides are placed in accordance with the modern K- Guide System. Due to its perfect balance, this rod seems to be very light, but at the same time incredibly powerful to fight any big fish!

**STREETRACER STREET FISHING**

Over the last few years, fishing on the city embankments with ultralight lures is becoming more and more popular. Inspired by this idea, we have developed a series of spinning rods called Streetracer. This unique multi-purpose series of light and ultra-light spinning rods was specially designed for “mobile” fishing in the city area. The basic concepts of Streetracer were compactness and narrow specialization. All the rods of this type have 3-section blanks, which are very important when the rods are being transported in overcrowded city transport. Streetracer series includes four models of spinning rods, which would be of great demand at any of the fishing spots in the city area:

**Nano Jig** – Medium action spinning rod for fishing with ultra-light micro-jigs weighing up to 3.5 g.

**Twitching** – Fast action twitching spinning rod for fishing with lures weighing up to 12 g.

**Ultra Light** – Medium-Fast action spinning rod of Ultra light class for fishing with lures up to 7 g.

**Light** – Medium-Fast action spinning rod of Light class, for fishing with lures up to 10 g.

The blank is made of IMF carbon, equipped with SIC micro-rings (AT-GUIDE), placed in accordance with modern K-Guide Concept. All the rods of this series have a split handle and Warm Reel Seat. No matter what type of fishing you prefer – “Rock Fish” or “Nano Jig”, “Twitching” or “Ultralight” - in the Streetracer range you will find all the required models. This is an elaborate series of rods, which allows an effortless lure control and lets the angler feel the lightest of bites.

**STREETRACER** ROCK FISH

Over the last few years, fishing on the city embankments with ultralight lures is becoming more and more popular. Inspired by this idea, we have developed a series of spinning rods called Streetracer. This unique multi-purpose series of light and ultra-light spinning rods was specially designed for “mobile” fishing in the city area. The basic concepts of Streetracer were compactness and narrow specialization. All the rods of this type have 3-section blanks, which are very important when the rods are being transported in overcrowded city transport.

In addition to the models listed above, the series includes one more item: Rock Fish – Medium-Fast spinning rods with special glued-in tips for the best control of ultra-light jig baits weighing 5g, 6g or 7g. The blank is made of IMF carbon, equipped with SIC micro-rings (AT-GUIDE), placed in accordance with modern K-Guide Concept. All the rods of this series have a split handle and Warm Reel Seat. No matter what type of fishing you prefer – “Rock Fish” or “Nano Jig”, “Twitching” or “Ultralight” - in the Streetracer range you will find all the required models. This is an elaborate series of rods, which allows an effortless lure control and lets the angler feel the lightest of bites.

Neon Spy

This new series of spinning rods was based on the popular Wild Power-X blank. All rods of this series feature bright, creative design and excellent hi-tech equipment. The rods are fitted with SIC guides in Tangle Free frames which help eliminate tangles. They are placed in accordance with ultra-modern K-Guide System concept. The split handle is made from dense fine-pored neoprene (EVA); and a special 'warm' reel seat is used in this series for better tactile comfort. Such handle design makes it possible to use two types of grip: "classic" and "sports", when a forefinger is put directly on the blank thereby increasing its sensitivity. High quality equipment of Neon Spy rods at a quite reasonable price make them extremely popular among all anglers.

ADVISOR JIG

This rod was specially designed for jig fishing. It has a number of characteristics well suited for this fishing method: an Ex-Fast action blank, an elastic tip, lightweight and effective guides, and a reel seat featuring increased sensitivity. All these features provide an incredible sensitivity and maximum comfort during jig fishing.

The choice of length and test of the rod usually depends on fishing conditions. The Advisor range is wide enough to find a rod, which would meet your requirements. The blank is made of IMF carbon, equipped with SIC guides in Tangle Free frames, placed in accordance with K-Guide Concept. Tangle Free frames solve the problem of braided line tangles, which is very important when casting small jigging lures. The ergonomic split-grip handle reduces overall weight of the rod but increases its sensitivity and improves balance. Despite its narrow specialization, this rod can be perfectly used for other types of fishing, such as fishing with spoons and spinners. Short rods can be applied for "twitching". Thanks to its Ex-Fast blank, Advisor can easily "twitch" even the hard-pulling lures.

ADVISOR TWITCHING/CHUB

TWITCHING

CHUB

ADVISOR spinning rods are specially designed for lure fishing. The series is represented by both models for minnow wobblers twitching, and spinning rods for catching chub on crankbaits. The rod blank is made of IMS graphite, equipped with SIC guides in Tangle Free frames, placed in accordance with K-Guide Concept. Warm reel seat is equipped with a modern plastic screw, which increases the sensory HSS (Hyper Sensitive System) and provides comfort when fishing in all weather conditions. The split-grip handle, made of high-quality fine-pored neoprene (EVA), reduces the weight of the spinning rod, while significantly increasing sensory and improving balance. Due to the use of the most modern materials and high-quality components in the rods of this series, it was possible to combine light weight, great sensitivity of the blank and a large margin of safety.

ADVISOR WINTER JIG EDITION

ADVISOR WJ is a unique series of all-weather jig spinning rods. Comfortable fishing at low temperatures is provided by large sizes of runnings and tulip, as well as a “warm” reel seat (Warm Reel Seat). Handle has split design, made of dense finely porous neoprene (EVA), has a modern design and provides a comfortable grip. The main difference between the WINTER JIG series and the classic ADVISOR is the blank material – high-modulus graphite HMN, which allows you to feel the most cautious bite of a predator on ultra-long casts. Spinning rods are equipped with guides with SIC inserts in Tangle Free frames arranged according to the K-Guide Concept system.

This series has the most suitable set of characteristics for jig fishing: ex-fast action, elastic tip, light and productive guides, reel seat with increased sensitivity (Hyper Sensitive System). ADVISOR WJ is a modern fishing tool with high performance that will satisfy the most demanding jig fishing enthusiasts.

High Energy-Z

The main task in creating the updated series High Energy-Z was to bring it to a new technological level, and the engineers obviously succeeded in it. Being made of the same material as the previous generation, the new rod turned out on average 12% lighter, whereas the thickness of the blank remained the same. The engineers decided not to paint the blank, they used lighter and smaller guides and equipped the rod with a split handle. As a result, they have achieved some weight reduction and more accurate blank performance. The residual oscillations after casting have practically disappeared. Now the blank recovers instantly, its action becomes more "fast". The blank is made of high modulus HME carbon fitted with K-frame SIC guides placed in accordance with the advanced K-Guide System, and equipped with the unique reel seat. We would like to draw your attention to the latter component, because its design is unique. All the details were made streamlined and have no protrusions or sharp edges, which is extremely convenient for anglers' hands. The split-grip handle is made of dense fine-pored neoprene (EVA). The High Energy-Z spinning rod is capable of performing many different tasks and copes with them very successfully.

High Energy-Z JIG

This is a specialized jigging rod which was designed with the help of professional anglers who took into account all the aspects of “heavy-jig” fishing. The High Energy-Z Jig series looks almost the same as the universal High Energy-Z series but their guides, reel seats and the tapers of the rods are completely different. This spinning rod is perfectly balanced and has the maximum set of options for jig fishing. It features Ex-Fast action, lightweight high-performance guides, HSS reel seat (Hyper Sensitive System). The blank is made of high modulus graphite HME, the butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. After casting, the oscillations get dumped effectively, the blank recovers almost instantly, which results in excellent casting quality. The rod is equipped with the Korea T-Zirconia Slim Guides with ultra-thin zirconia inserts, placed in accordance with K-Guide Concept. The essential features of the reel seat are 2 clumping nuts - one nut tightens the other and doesn't allow the reel to get loose when fishing with heavy jigs. The split-grip handle is made of dense fine-pored neoprene (EVA). Thanks to its accurate Ex-Fast blank, the rod doesn't “fall through” when using aggressive jigging methods and allows to hook the fish reliably.

**BLANK**

- Material: High modulus HME graphite
- Ex-Fast Action
- SST (Soft Sensitive Tip) - technology used to increase the sensitivity of the blank

**REEL SEAT**

High Energy-Z VJ

The HIGH ENERGY-Z VJ is a lightweight, comfortable and extremely sensitive rod for vertical jig fishing from a boat. This series has the most suitable set of characteristics for jig fishing: ultra-fast action, elastic tip, light and productive guides. Blank material - HME high modulus graphite, guides are located in K-frames with SIC inserts arranged according to the K-Guide concept. The spinning has split type handle, made of dense finely porous neoprene (EVA), has a modern design and provides comfortable grip. Warm reel seat (Warm Reel Seat) is equipped with a modern plastic nut that increases the sensory properties (Hyper Sensitive System). The model range is presented by two-part model, and 1+ model (the blank is inserted into the handle). The sensitive tip (painted red) with a strong butt provides the perfect action for maximum performance in vertical jigging. The spinning rods lengths were specially selected in a way so, on the one hand, you can perform precise placement of your bait next to underwater objects and have precise control of the soft bait, and, on the other hand, the weight of the spinning rod was minimal and it allows you to enjoy fishing for a long time.

GRAVITY X JIG/MICROJIG

GRAVITY X JIG is an updated version of the popular ex-fast action rod series, specially designed for jig fishing. The appearance of the spinning rod has undergone a number of small changes, while retaining its recognizability and individuality. GRAVITY X JIG has received a new blank, with a faster action than the previous version, thus, the efficiency of the spinning has increased with aggressive jig bait tosses. The blank material is HMN high modulus graphite. The update of the line also affected the number of guides – new version has increased amount of guides, which allows you to distribute the load on the blank more evenly. The range of models of different lengths and tests within the line has become wider. The butt of the rod is reinforced in a special way (Xwxw technology) to increase strength and resistance to twisting. The spinning rod is equipped with super light and durable T-Zirconia Slim Rings with an ultra-thin zirconia insert. The most productive modern guides in combination with the ergonomic «skeleton» TVS reel seat allow you to achieve excellent sensory and provide comfortable and secure grip. Split handle design reduces the weight of the spinning rod, while increasing its sensitivity and improving balance. The elastic tip of the spinning rod (SST technology) provides maximum feedback when working with baits of the entire test range, a powerful butt part allows you to confidently manage with huge fish. GRAVITY X JIG is an excellent spinning rod that will be appreciated by both beginners and experienced anglers.

Legend AREA

MAXIMUS Legend AREA is a specialized series of pond trout spinning rods. The medium action makes the work of the rod smooth and delicate, and the well-balanced blank of high modulus HME graphite allows precise casting and control of the bait during retrieving. Legend AREA rods are equipped with AT-GUIDE ultra-lightweight SIC guides arranged according to the K-Guide Concept. The use of a spaced cork handle reduces spinning weight and improves balance. The warm reel seat is equipped with a HSS (Hyper Sensitive System) carbon resonator that increases sensitivity. The light weight of the rod allows you to comfortably perform complex animations of the bait and get true pleasure from fishing.

*Legend* NANO

Legend NANO spinning rods have been specially designed for fishing with ultralight weights, jig heads. The series consists of two rods (Nano-Jig) for jigging and two spinning rods (AREA soft baits) for using light trout jig heads. The rods combine lightness, comfort of use and good strength and durability characteristics. Blank of the spinning rods is made of HME High Modulus Graphite and equipped with ultra-lightweight AT-GUIDE guides, so you can easily control the lure and feel the moment even with minimal bite. Guides are arranged according to K-Guide concept. Comfortable extended handle with cork elements reduces the weight of the spinning rod, while significantly increasing sensory and improving balance. Legend NANO is equipped with modern ergonomic reel seat HSS (Hyper Sensitive System), thanks to which the spinning rod is extremely comfortable in hands and has excellent sensorics. All rods are best suited for delicate fishing that requires the “right” animations with lightest lures.

ULTIMATUM JIG

The Ultimatum spinning rod has gained well-deserved popularity among anglers. Since the number of fans of jig fishing constantly increasing, we have introduced a new range of rods called Ultimatum JIG. Spinning retained all the positive qualities of the universal model, such as high sensitivity, long casting distance and confident performance during fishing. At that same time, the Ultimatum Jig received a new blank made from high modulus graphite HMN with reinforced butt and middle part and elastic top (SST technology). The rod has acquired a full-fledged «jig» specialization. The rods of this series have SIC guides with Tangle Free frames that prevent line overlap. The arrangement of the guides is made according to the modern concept of the K-Guide System. The rod has split type handle, made of velvet warm neoprene (EVA) and equipped with an ergonomic reel seat with carbon nut, which provides comfort when fishing in any weather conditions. The correct action of the blank made of high-modulus graphite, in combination with a convenient reel seat, makes spinning rods of the Ultimatum JIG series are incredibly informative (MAX SENSITIVITY) tool for jigging in all conditions.

**Mescalito** JIG LE

Model is produced in a limited edition. This specialized jigging rod has been developed with the help of professional anglers for the most comfortable and successful fishing experience. Mescalito is a lightweight, comfortable and extremely sensitive rod for fishing with all types of jigs. Thanks to its accurate Ex-Fast blank, the rod doesn't "fall through" when using aggressive jigging methods and allows to hook the fish reliably. The spinning rod is perfectly balanced and designed for professional jigging. It features Ex-Fast action, lightweight high-performance guides, HSS reel seat (Hyper Sensitive System).

The blank is made of high modulus graphite HME, the butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. After casting, the oscillations get dumped effectively, the blank recovers almost instantly, which results in excellent casting quality. The rod is equipped with the Korea T-Zirconia Slim Guides with ultra-thin zirconia inserts, placed in accordance with K-Guide Concept. The number of the guides and their diameters have been increased compared to the standard models. The increased number of the guides ensures an ideal load distribution throughout the length of the rod. This makes for better performance of the rod during casts and retrieves. The increased diameters of the guides on the rod make it more comfortable to use in cold temperatures. The handle is designed to achieve comfortable grip and maximum sensitivity.

**BLANK**

BLACK WITCH SPINNING

Black Witch is a new generation of high-tech spinning rod, assembled on a HME high modulus graphite blank. The rod is being made in two versions at once, universal spinning and jig version. Universal spinning rods have a fast (Fast) action and fit for almost all types of baits, such as wobblers, oscillating and spinning baits. The spinning rod handle type is solid, completed with an ergonomic «warm» reel seat (Warm Reel seat). The jig version is a rod with extra fast (Ex-Fast) action, with a split type handle, equipped with a reel seat anatomical design. The Black Witch Jig is an incredibly informative jig fishing tool. All handle material models - high-quality «velvet» neoprene (EVA). Guides have SIC inserts and are arranged according to the K-Guide Concept. Thanks to the special shape of the rim of the guides (Tangle Free) there will be no overlap of the cord when casting the bait. All reel seats are equipped with a carbon nut that increases sensory HSS (Hyper Sensitive System) and provides comfort when fishing in various weather conditions. Black Witch is a modern rod suitable for catching any predatory fish species with various fishing styles.

MANIC CASTING TWITCHING

This is an Ex-Fast Action casting rod to be the perfect match with multiplier reels. Specially designed for twitching but also can be used for fishing in snags, underwater vegetation and jig fishing. Thanks to Ex-Fast Action blank, spinning rod has an incredible margin of power necessary when fighting with a fish on forced retrieve, fishing in snags and in other difficult situations. Blank is made from high modulus HME carbon, equipped with warm reel seat featuring Super Sensitive System technology. Manic Casting rods are fitted with SIC guides with Tangle Free frames helping to prevent any line tangles. Guides are placed in accordance with modern K-Guide System concept. Ideal balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and feel confident while retrieving any fish regardless of its size.

MANIC X

The Manic X spinning rod continues the series of rods designed for the jerky “twitching” fishing technique that is very popular among fans of spinning fishing on wobblers. The model received a completely new blank made of HME high modulus graphite. Unlike its predecessor, the Manic-X has a stiffer middle section, which allows you to use it with both jerking and jigging fishing techniques. Also, it is worth noting, that high-informative and responsive blank, allows you to feel every movement of the wobbler. Moreover, the wobbler can be at any weight within the rod’s stated test range. Manic-X has excellent sensory (HSS), but at the same time, the strength of the blank allows you to fish in the most difficult conditions and calmly play the trophy specimens. The reel seat is equipped with a carbon nut, the handle is made of a combination of cork + EVA, which ensures comfort when fishing in various weather conditions. The spinning rods of this series are equipped with guides with SIC inserts enclosed in Tangle Free frames which prevents line overlap. The arrangement of the guides is made according to the modern concept of the K-Guide System. The series of rods is supplemented with specialized Manic spinning rods X BB (Big Bait) medium-fast action specially for fans of fishing with super-large lures. These rods have great power, allowing you to safely catch any fish regardless of the size of the trophy, in absolutely any conditions. The main specialization of BB spinning rods is catching trophy pike on large silicone lures. But you can also use other types of baits, for example, swimbaits. Rods allow you to operate with baits weighing up to 200 g without experiencing any inconvenience. Far casting, high sensitivity and excellent ergonomics will allow anybody to enjoy trophy fishing.

Neon Midori TROUT

This is a series of hi-tech spinning rods specially designed for the most effective trout fishing. It consists of four models: Neon Midori Area Edition 602XUL (test: up to 4 g) suitable for pond trout and classified as “Area Fishing”; Neon Midori Stream Edition 622SUL (test: up to 5g), 662UL and 702UL (test: up to 6g) suitable for fishing in rapid mountain streams, small medium-fast running rivers and brooks. All Midori rods are perfect for delicate fishing style requiring “animation” of plastic lures, lightweight jigs, micro spoons or wire rigs. Midori blanks feature medium-fast action, slightly more stiffness compared with classic Area and Stream rods and the shortest damping period (that is how rapidly a rod will damp out vibrations). All the other characteristics of our ultralight trout rod remained the same – long and accurate casting of lures of any size or weight, the possibility to use various “animation” techniques, superb sensitivity, perfect balance and ultralight weight. This rod is manufactured from high modulus NANO carbon fibers. It is built with premium modern components: ultra-light guides Korea T-Zirconia Slim Rings in super light frames with ultra slim Zirconia inserts and ergonomic Fuji skeleton TVS reel seats. Due to the unique combination of NANO fibers, Korea T- Zirconia Slim Ring, Super Sensitive System and Mini Guide System we managed to create an exceptionally lightweight rod with incredible sensitivity and amazing power. This flexible blank can minimize hookpulls and line breakage giving you the best fishing experience you have ever had!

# Marauder X TWITCHING

Our great twitching rod got a new design. The changes mainly affected the ergonomics of the handle; our engineers modified it to have a more complete look. The Marauder-X Twitching rod was specially designed for jerking retrieve technique and every detail was thoroughly developed: ultra-light, Ex-Fast action blank, made of high modulus HMN + HME graphite (40 + 46T combination). The butt section reinforced with special carbon fibers to increase rigidity and resistance to twisting. FUJI guides with Alconite inserts, placed in accordance with modern KR-Guide Concept. Only when all the above components were combined we were able to build an ideal rod for twitching. This rod will allow anglers to feel every movement of a lure, it will work precisely and the tip will not «fall through» when using an aggressive twitching technique.

Egoist LE

This is a new limited series of the popular spinning rods Egoist LE which raises the bar of rod building to a higher level. The blank is marked with Extra-Fast action in contrast to its namesake with marking "X", which had Fast Action blanks. New series rods are fitted with FUJI SIC guides with Tangle Free frames. Guides are placed in accordance with modern K-Guide System concept. For this series producers have used a new type of FUJI reel seat which has absolutely the best sensitivity. Due to use of modern materials and high-quality rod components this series combines excellent casting performance and high sensitivity. Perfect balance and elaborate design of this model help an angler to make very accurate casting, recognize all bottom details and enjoy retrieving.

Egoist-Z

NOTHING'S PERFECT,  
EXCEPT ME!

The newly redesigned series of the popular spinning rods Egoist will please all fans of fishing with ultralight gear. Due to the use of modern materials and high quality components, it became possible to create an incredibly responsive fishing rod for long casting. A number of technical changes have been made including modification of guides. On our spinning rod marked with prefix Z, we have used the lightest guides in AT frames made in South Korea. The elaborate design of the inserts allows using all types of modern fishing lines: fluorocarbon, polyester, nylon, and, of course, all types of braided lines. The blank is made of high modulus HME graphite and fitted with extra-light Korea T-Zirconia Slim Ring with ultra-thin zirconia inserts. The ultra lightweight guides in combination with the ergonomic «skeleton» TVS reel seat provide an excellent balance of the rod and a comfortable and reliable grip. The split handle design helps to reduce overall weight of the rod and at the same time increases its sensitivity.

K-Guide

AT-Guide

The limited series of spinning rods Dreamer-Z belongs to the premium class rods and is associated with technological progress. They are exclusively assembled with premium FUJI accessories: for lightweight models we used FUJI TITANIUM SIC – AT guides, for medium-weight – more powerful FUJI TITANIUM SIC – K-series guides, placed in accordance with KR-GUIDE CONCEPT. The reel seat: FUJI-VSS, X-JOINT (Spigot joint) construction. The blank is made of high modulus HMN graphite, its butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. Thanks to the use of high-modulus carbon fiber composites, we managed to build a slim blank that has a minimal diameter in its butt section and at the same time features Ex-Fast action. Our «Dreamer» comes fitted with the latest HSS construction (Hyper Sensitive System) with excellent sensitivity. The spinning rods of this series have the perfect combination of light weight, sensitivity and power.

K-Guide

AT-Guide

The redesigned series Raptor-Z has undergone a number of serious technical changes, and now is associated with technological progress. This top series of Maximus spinning rods is exclusively equipped with premium FUJI accessories: for lightweight models we used FUJI TITANIUM TORZITE-AT guides, for medium-weight – more powerful FUJI TITANIUM TORZITE-K guides, placed in accordance with KR-GUIDE CONCEPT. The reel seat: «Skeleton» FUJI-TVS, X-JOINT, or Spigot joint of rod sections. The blank is made of high modulus NANO GRAPHITE FIBER, its butt section is reinforced with special carbon fibers to increase rigidity and resistance to twisting. Features EX-Fast action. Thanks to the use of ultra-modern materials, we managed to create the blank with the smallest possible diameter. The new «Raptor» features an incredible sensitivity due to the modified technology HSS (Hyper Sensitive System). The company managed to apply the most advanced technologies and modern materials to this model.

# Satori JIG SPECIAL

GRAPHENE TECH<sup>®</sup>

MAX S<sup>S</sup> SENSITIVITY SYSTEM

The Satori JIG Special series is designed specifically for jig fishing. It is a premium spinning rod made of 46T modulated graphite with graphene filler. Due to such a structure of the blank the series has amazing sensitivity which allows to trace through absolutely all the details of the relief, feel signals and bites, and also has excellent casting characteristics. The blank is protected by an additional reinforced layer, which changes the characteristics of the rod as a whole, gives additional rigidity to the butt-end and significantly increases the torsional strength of the rod. The Satori JIG Special Series features Fuji's Torzite titanium guides and an ergonomic warm reel seat. In general, the Satori jig series combines an absolutely balanced fast blank with increased strength, classic design, excellent casting characteristics and unique sensitivity.

# Satori AREA SPECIAL

Satori series has a special rod for fans of trout fishing. The Area Special model combines all the most modern and necessary qualities for Area Fishing. Due to the special geometry and the use of graphene, the blank has a phenomenal sensitivity, which makes it possible to carry out delicate bottom tapping with both light spoons and silicone baits. High-quality accessories, lightness and power of this spinning will allow you to confidently cope with the trophy and enjoy the vivid emotions from fishing.

# Satori LONG CAST SPECIAL

The Long Cast Special spinning rod is specially designed for catching asp, chub and other fish species when it needs very long and precise casting. Like all Satori spinning rods, the Long Cast Special is equipped with Fuji fittings, Torzite titanium guides and warm reel seat with ergonomic design. Despite the fact that spinning has narrow specialization, the blank has exceptional sensitivity. It helps to notice all the details of relief and any changes in animation of the bait. Satori Long Cast Special is a powerful rod that allows to catch all kinds of large fish. The power of the blank allows to cope with any trophy and enjoy fishing.

**BOUNCER** TROLLING

This is a series of rods specially designed for trolling. This unique rod is unmatched in its class. Its blank is made of high-quality composite blend and features a J-Action, typical for trolling rods.

The Bouncer is equipped with anti-twisting guides featuring high corrosion resistance. The guides are placed in such a way that energy and stress are evenly spread throughout the length of the rod, preventing the line from sticking to the blank under the heaviest load.

The sensitive brightly coloured tip made by using Power Stick technology allows an angler to feel the action of a lure at the end of the line and accurately detect any fish bites. A special coating of the tip makes it easy to notice a fish bite even at twilight. These rods are equipped with classic screw-down reel seats and comfortable EVA handles. Bouncer is a reliable trolling rod that can be used both for fishing in freshwater and in the sea. It is suitable for anglers of all skill levels.

**BLANK**

- Composite material
- Trolling J-Action
- T Power Stick Top (sensitive and stiff tip)

**REEL SEAT**

- Classic screw-down

**GUIDES**

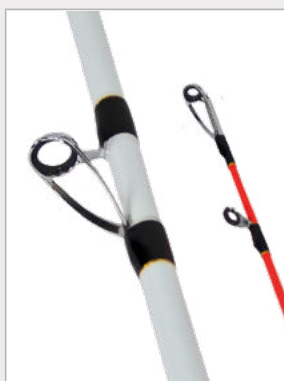

- SIC guides
- Antitwisting Tip
- Tangle Free construction
- Reinforced double foot

**HANDLE**

- Reinforced handle
- Material: EVA

## JAZZ

This is a professional series of trolling rods. The blank is made of high-quality composite blend and features a J-Action, typical for trolling rods.

We applied the Heavy Duty Guide Concept to our new JAZZ rods: we equipped them with powerful anti-twisting guides featuring high corrosion resistance. The guides are placed in such a way that energy and stress are evenly spread throughout the length of the rod, preventing the line from sticking to the blank under the heaviest load.

The sensitive brightly coloured tip made by using Power Stick technology allows an angler to feel the action of a lure at the end of the line and accurately detect any fish bites. A special coating of the tip makes it easy to notice a fish bite even at twilight. The rod has a gimbal with a protective removable butt cap, the powerful anodized aluminum reel seat and the comfortable high-quality EVA foam grip with a non-slip coating. JAZZ is a professional trolling rod specially designed for experts in trolling, which can be used both in freshwater and in the sea.

**BLANK**

- Composite material
- Trolling J-Action
- T Power Stick Top (sensitive and stiff tip)

**REEL SEAT**

- Reinforced aluminum screw down design with two clamping nuts

**GUIDES**

- SIC guides
- Antitwisting Tip
- Strong LC guide frames (Tangle Free)
- Reinforced double foot

**HANDLE**

- Powered Grip Construction (special technology providing an excellent grip)
- Graphite gimbal to be fixed on a fighting belt
- Material: EVA

FJORD

This is a rod specially designed for boat fishing with heavy jigs. Reliable lightweight rod is made from IMFI carbon. It is fitted with special guides in durable LC (Low Rider Guide) frames, designed for heavy loads. Handle is made in accordance with Powered Grip Construction technology from durable fined-pored EVA. A special perforation is applied to the upper part of the handle making the grasp more comfortable. Powerful reel seat is made from solid aluminum alloy with two clamping nuts for reliable reel fixation. Butt section has a special aluminum gimbal for use with fight belt. Powerful blank combined with X-Joint (spigot) are designed for extreme loads and have a huge margin of strength. This is an ideal choice for trophy cod, catfish and halibut fishing.

**BLANK**

- Material: IMFI carbon
- 2 sections
- Put over power joint
- X-Joint (spigot) connection

**REEL SEAT**

- Reinforced screw down design with two clamping nuts

**GUIDES**

- SIC guides
- Antitwisting Tip
- Tough durable top design with enlarged improved profile rings
- Durable Tangle Free frame LC
- Reinforced, double foot

**HANDLE**

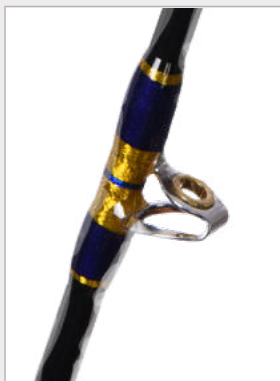

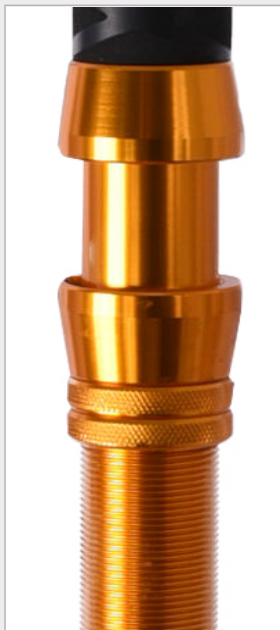

- Powered Grip Construction
- Aluminum gimbal buttcap
- Material: EVA

## SEA EMPIRE BOAT

This sea rod is specially designed for catching trophy halibut, cod, ling or sea bass. Sea Empire rods are produced using the unique Multi Tip Concept the idea of which is that rods are supplied with two tips for different purposes:

1) Interline Tip (fishing line runs inside the blank) – for fishing at depths up to 100m. The blank becomes more powerful due to equal load distribution.

2) Tip with classic guides placement is ideal for fishing at depths greater than 100m where fast sinking of a lure is more important than power characteristics of a blank. Each rod of this series is supplied with two tips which makes it really universal in the very best sense of the word. You will be prepared for any situation that may arise. If you have lost or broken one tip, you can continue fishing using the second one. In fact, you will get two rods in one. Sea Empire blanks are made of IMS carbon featuring unique Power Carbon Construction providing ultimate strength which is so necessary to handle extreme load when fighting a trophy sized fish. Sea Empire rods are equipped with a quality aluminum gimbal buttcap, reliable aluminum reel seat with two clamp nuts, excellent SIC guides with modern stainless steel LC (Low Rider) frames and salt water protection. The handle is made using Powered Grip Construction technology of a durable fined-pored EVA (neoprene). A special perforation is applied to the upper part of the handle making the grasp more comfortable.

These rods are capable of more than we expect. The elastic tip absorbs jerks very well whereas the powerful butt section allows to fight a big halibut or cod.

**BLANK**

- Material: IMS carbon
- 2 sections + additional tip
- Конструкция – штекерная усиленная
- Reinforced put-over joint

**REEL SEAT**

- Reinforced screw down design with two clamping nuts

**GUIDES**

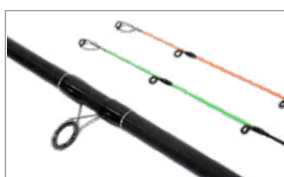

- SIC guides
- Antitwisting Tip
- Heavy Duty Tip Top with enlarged and improved profile of the insert
- Heavy Duty Tangle Free frame LC
- Reinforced, double foot
- Power Interline construction preventing line from overlapping

**HANDLE**

- Powered Grip Construction
- Aluminum gimbal buttcap
- Material: EVA

## Agent X FEEDER

Popular Agent feeder rod series has been upgraded and now, it is represented by the modern Agent X line of rods. These rods are medium-fast action rods with a modern and spectacular appearance. The rods belong to low price category, but it is easily capable of satisfying the most demanding anglers. Agent X is available in a range of tests from 10 to 150 g and a length of 270 to 390 cm, which allows you to choose optimal rod for any fishing conditions, both in still water, using light feeders, and in strong stream waters, with heavy weights. The feeder is made of IMF graphite, equipped with guides with SIC inserts, handle made of cork and neoprene (EVA). It is sealed with three tops of various degrees of rigidity. High-quality graphite blank provides necessary rigidity and excellent casting ability of the rod.

**BLANK**

- Material – IMF graphite
- Medium-Fast Action

**REEL SEAT**

- Ergonomic design
- Warm Reel Seat

**GUIDES**

- SIC guides
- Low profile reinforced (2 on two feet, rest on feet)

**HANDLE**

- Ergonomic design
- Cork + EVA (Neoprene)

**INDIVIDUAL PROPERTIES**

- Three interchangeable tops in tube

## INTEGRO FEEDER

**SIC**  
 SIC  
 GUIDE

Integro is a series of budget feeder rods with a modern and eye-catching design. This series at a low cost is able to satisfy the most demanding anglers. Integro has a very wide size and test range – from 240 to 420 cm from 10 to 180 g, which allows you to choose the optimal fishing rod for any conditions, suitable for standing water and the use of light feeders, as well as for water with strong currents and the heaviest weights. The feeder is made of a combination of materials – the reinforced comel is made of IMF graphite, the upper parts are made of high-modulus graphite, which makes the fishing rod very strong with the correct load distribution during casting, providing excellent castability and the necessary rigidity. The feeder is equipped with a modern reel seat, the handle is made from a combination of cork and EVA, SIC guides, three interchangeable tops of different rigidity are included.

**BLANK**

- IMF graphite
- Medium Action

**REEL SEAT**

- Classic screw

**GUIDES**

- SIC guides
- Low profile reinforced (2 on two feet, rest on feet)

**HANDLE**

- Ergonomic design
- Cork + EVA (Neoprene)

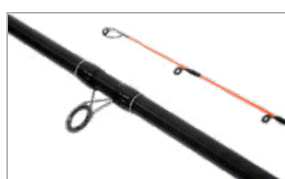

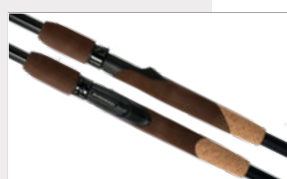

**INDIVIDUAL PROPERTIES**

- Three interchangeable tops in tube

## JASPER FEEDER

Jasper is a new, modern and technological series of feeder rods that immediately attracts attention: bright and non-standard design with a split type handle. The handle allows you to lighten the rod and saves you from such problems as bait contamination and loss of appearance. The new feeder rod is available in tests from 30 g to 180 g and lengths from 300 to 390 cm. Jasper has a medium-fast action blank which is made of IMF graphite with a reinforced butt. The rod allows you to make precise and long-range casts. Despite the fact that the blank is elegant and light, the feeder has sufficient rigidity for catching and playing any kind of fish, including trophy specimens. Jasper is equipped with a warm modern reel seat, the handle is made of a combination of cork and EVA, SIC guides, three tips of different rigidity are included.

**BLANK**

- IMF graphite
- Medium Action

**REEL SEAT**

- Ergonomic design
- Warm reel seat

**GUIDES**

- SIC guides
- Low profile reinforced (2 on two feet, rest on feet)

**HANDLE**
